Snap-on

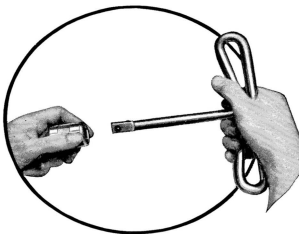

INTERCHANGEABLE
SOCKET WRENCHES

SNAP-ON Handles and Sockets snap together easily and instantly, yet they are locked positively until pulled apart again. A spring-operated friction ball recessed into the square shank of each handle holds the socket or attachment firmly. The thickness of handles and socket walls where the handle enters is sufficient to provide strength even superior to any solid handle wrench, with just the proper taper turned on the working end of the socket for the hard-to-get-at places.

Snap-on

Special Front Bearing Socket for Fords

A special socket fitting any Snap-on handle, for quickly and easily removing or assembling the Ford Front Bearings.

No. 36-F Price, each... \$.75

Here's how the Special Front Socket removes the spindle nut (Ford No. 2707-8) and adjusting cone (Ford No. 2705-6) without a tool change—a definite saving of time and money. An exclusive Snap-on feature.

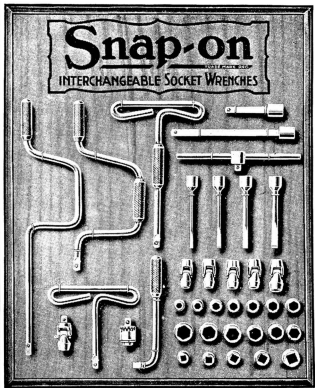

Gripper Screw Drivers

A handy tool for starting small screws in hard-to-reach places. The end of the blade is split forming a spring bit that can be compressed into the slot of small screws and holds them firmly for starting. A great time saver in magneto, generator, starter, and radio work. Made in two lengths.

No. 1 4½" inches long over all..... \$.45
No. 2 6 " inches long over all..... .50

No. 850 Dealers' Display and Master Stock Assortment

GROUPED on the Dealers' Display Board is shown the few units from which the dealer can immediately select (with the aid of the Snap-on "What Car Do You Drive" Book,) any single purpose wrench asked for or a set of perfectly adapted tools for any car made. From this board, the dealer also serves the automobile mechanic, farmer and industrial trade with their every socket wrench need. Every handle socket and unit contained in this stock assort-

Snap-on

ment are standard types and sizes made with the Snap-on friction ball retaining principle. This principle gives the dealer a flexible stock of wrenches as it enables him to snap together the proper size of socket and type of handle to meet every need without the necessity of carrying a large stock of tight socket wrenches of every size and description. This Snap-on stock gives the equivalent of a complete socket wrench department on a very small investment that will give quick turnovers and larger profits. Leading car manufacturers endorse Snap-ons to their service stations and there are now more than 150,000 Master Mechanic sets in daily use in garage and service stations. There is a ready sale and demand for Snap-ons in your community.

Sets for Car Owners

A typical Snap-on car owners set. Illustration shows a perfectly adapted set for Buick owners use

SELLING Snap-ons to car owners is so greatly simplified by the Snap-on Selected Kit that it is almost purely a matter of meeting the demand which a mere descrip-

tion of the Selected Kit will create. The Snap-on Selected Kit is unique—there is nothing else like it. It provides the car owner with a set of Snap-on units specially selected for his own car, with no excess parts that will not fit anything on his car. Using the lists in the "What Car Do You Drive?" book which we furnish to our dealers, the dealer can select a Kit for any individual car in a minute's time, and the total price of the units required will be so low that the sale is certain.

One Year Guarantee

EVERY Snap-on unit is guaranteed for ONE YEAR from date of purchase against imperfections or defects in workmanship or materials. Should any unit break within this period—due to causes which in your judgment are faults of the wrenches themselves—simply mail the broken part to us and it will be replaced promptly free of charge.
